Weather Key Points

Regional Operations Center

Western Region

Thursday, February 16

- Cold temperatures will linger across the state through Thursday, with a warming trend expected for Friday into the weekend
- Dry conditions are expected across the state through Monday, with low chances of light precipitation along the coast Thursday through the weekend. No significant impacts are currently expected.
- A much more active weather pattern will likely develop for next week, with the first storm system currently expected to impact the state Tuesday and Wednesday
 - This storm will likely produce widespread gusty winds, valley rain, and mountain snowfall

OF EMERGENCY SERVICES

Weather Outlook (6-14 Days)

Regional Operations Center

Western Region

Thursday, February 16

6-10 Day Outlook (February 21 - February 25)

Temperatures

- Below normal temperatures are strongly favored statewide

Precipitation

- Above normal precipitation is favored statewide

8-14 Day Outlook (February 23 - March 1)

Temperatures

- Below normal temperatures are again favored statewide

Precipitation

- Above normal precipitation is favored statewide

Wildfire Forecast and Threat Intelligence Integration Center

STATEWIDE WILDFIRE RISK POTENTIAL

Thu Feb 16, 1200hrs

Fri Feb 17, 1200hrs

Sat Feb 18, 0900hrs

Acres

 < 10  50  100  500  1000  5000  10000  > 10000

Each map shows the time with the highest wildfire risk potential. 8 hour simulations are run every three hours of the day to produce a map of wildfire risk potential in acres. The average number of acres in an area should not exceed the associated number in the legend. Risk forecast does not consider suppression efforts. Courtesy of Technosylva.

Weekly Fire Potential and Weather Forecast

Northern Region

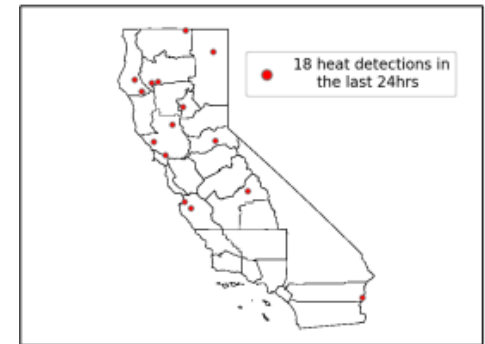

- Significant fire risk will remain in the "little to no risk" category for the next 7 days, despite some breezier, dry wind periods due to the lack of flammable fuel alignments across all elevations.
- Fire business trends (initial attack) may increase this weekend thanks to the drier conditions and likely extra human activity.
- Moisture found within the mountain snowpack currently ranges 150-190% of normal for the date with the deeper and more consistent snowpack remaining above 4,000-5,000 ft.
- Dead fuel moisture values will generally lower through the weekend responding to the lowering RH trend especially west of the crest, then rise earlier half of next week. ERCs will be unusually high with unusually dry dead fuel moistures for the time of year, most PSAs through the weekend, but values won't be at significantly flammable levels. ERC's will lower with time next week.
- Herbaceous grass and forbs are exhibiting a solid flush of green-up, generally below 2,500-3,000 ft, and the abundant soil moisture will continue to feed this growth although cooler temperature periods will lessen the intensity of growth. The abundant standing dead from the previous growing season has been significantly altered or "melted", thus lowering the fire spread threat across many areas.
- Live woody brush-shrubs and tree canopies contain mixed flammability based on the limited sampling that has been done the past month. Dormancy has set in across the mid- and upper elevations with little change expected. Some new growth is occurring for some species across the lower elevations with blossoms becoming more apparent across the lowest elevations.

Southern Region

- There will be little or no fire activity across the region through the forecast period.
- The region will sit in between high pressure to our northeast and low pressure to our west then southwest for the next several days. A deep trough is likely to move over the West Coast by the middle of next week.
- Light offshore flow will continue over Southern California through Saturday, with occasional periods of 30 to 40 mph northeasterly gusts below windier canyons and passes. Winds will become light Sunday and Monday.
- Temperatures will be 5 to 10 degrees below normal today, with upper 20s and 30s across the mountains and mid 50s to mid 60s in most coastal, valley, and desert areas.
- Temperatures will warm to near normal by Friday and remain near to slightly above normal through early next week, with mid-40s to mid-50s across the mountains and 60s to low 70s in the valleys and deserts.
- Minimum humidity will be mainly between 12% and 25% away from the San Joaquin Valley through Sunday, then increase to mostly above 25% early next week.

COVID-19 SUMMARY

Coronavirus Disease 2019 (COVID-19)

On 03/02/20 at 0700 hours, the Cal OES State Operations Center (SOC) activated at Level 1 in support of the California Department of Public Health (CDPH) Medical Health Coordination Center's (MHCC) statewide response to COVID-19. Cal OES will continue to provide resource coordination for the COVID-19 event, as well as situation status reporting and advance planning across multiple areas.

SMARTER Plan

On 10/17/22, Governor Newsom unveiled the "[California Smarter Plan Updates October 2022](#)". The plan emphasizes continued readiness, awareness and flexibility and helps ensure California can maintain its focus on communities that continue to be disproportionately impacted and stay prepared to swiftly and effectively respond to emerging COVID-19 variants and changing conditions. Governor Newsom is set to lift the State of Emergency in early 2023, and this update provides information on California's progress to date and how we move forward.

CDPH Statewide Travel Advisory

- For more information: [CDC Travel Guidelines](#)

Confirmed California COVID-19 Cases - Per California Department of Public Health Tracking COVID-19 as of 02/15/23 at 1630 hours: (report updated bi-weekly)

- 11,084,818 (+23,086) total confirmed cases.
- 99,960 (+266) total deaths.
- Please see the most recent "Situation Report - COVID-19" attachment for additional details.
